Create token to manage private repo with cli

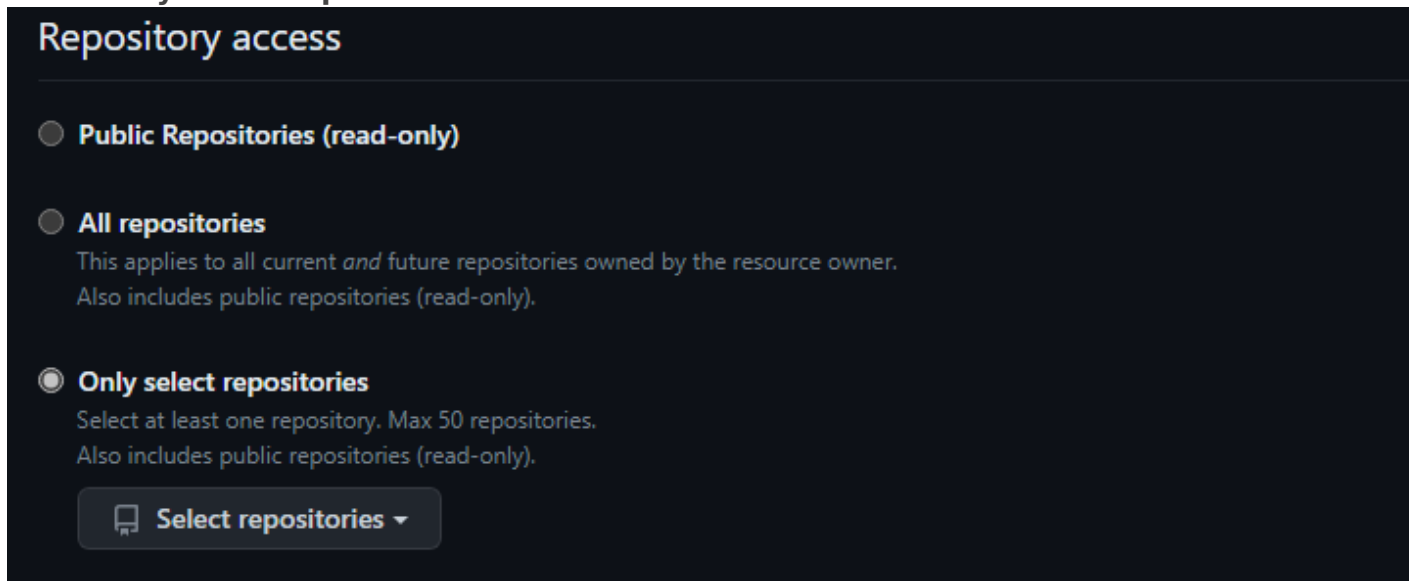

Go to this url:

<https://github.com/settings/tokens?type=beta>

create a new token

Select **Only select repositories**

Repository permission:

1. contents => read & write
2. Commit statuses => read & write

Save token and copy it, then git clone with this command

```
git clone https://ghp_5iOVfqfgTNeotAlsbQtsvyQ3FNEOos40CgrP@github.com/<your account or  
organization>/<repo>.git
```

Get linux aliases

git clone

<https://github.com/Ezequiel11A/aliases>

CheatSheet
